

logarithm. **RG**-Empfindlichkeit $\log U_a = \log U_o$

$$U_a = (P_a \cdot D_a)^{0,5}$$

$$\log P_a = \log P_o + 0.24$$

$$\log U_a = (\log P_a + \log D_a) / 2 \quad \log D_a = \log D_o - 0.18$$

$$\log [U_a, P_a, D_a, T_a]$$

$$\log T_a = \log T_o - 0.68$$

Adaptation: $\lambda_{PD}=505$

$\lambda_{TD}=475$

Schwelle
 $t_a=0.007$
