output: no change compared to input

Equivalent spacing for separate and adjacent colours (Yes/No decision)

Layout example of the hue plane O-C, Y-V oder L-M mit 17 grey steps

Chromatic X
X = O, Y, L

There are three opposite hue planes
O-C, Y-V, and L-M.
The colour steps are
separate in the upper figure part
and adjacent in the lower figure part.
Between N and W there are 9 grey steps.
Mean grey Z is the mean step of N-W.

All the steps of the three hue planes O-L, Y-V and L-M should be equivalent for separate and adjacent colours.

Is the spacing equivalent for separate and adjacent colours?

Remark: The spacing is not equivalent if there is at least one X in one of the following cases; for example see Annex (X):

Is there a continuous colour change
for adjacent colours and not for separate colours?

underline: Yes/No

Are there maxima and minima in the colour change
for adjacent colours and not for separate colours?

underline: Yes/No

underline: Yes/No

Regular chromatic spacing between colours Z-X' and Z-X (Yes/No decision)

Layout example of the hue plane O-C, Y-V oder L-M mit 17 chromatic steps

Chromatic X
X = O, Y, L

There are three opposite hue planes
O-C, Y-V, and L-M.
The colour steps are separate in the
upper part and adjacent
in the lower part.
Between X' and X there are 17 chromatic steps.
Mean grey Z is the mean step of X'-X.

All chromatic steps of the three hue planes O-L, Y-V and L-M should be regular for separate and adjacent colours without large chromatic jumps at mean grey Z

Is the colour spacing regular at mean grey Z?

underline: Yes/No

Remark: The colour spacing is not regular if there is at least one Y in one of the following cases; for example see Annex (X):

Are there colour jumps at the mean grey colour Z towards X or X'
for adjacent colours?

underline: Yes/No

Are there colour jumps at the mean grey colour Z towards X or X'
for separate colours

underline: Yes/No

Remarks: A colour jump has at least twice the colour change compared to the mean change
