Figure 1: A 3D visualization of the color space defined by the 1931 CIE colorimetric system. The vertical axis represents luminance (Y), ranging from 0.00 to 1.00. The horizontal axis represents the relative blue-white chromaticity (x), ranging from 0.00 to 1.00. The depth axis represents the relative red-green chromaticity (y), ranging from 0.00 to 1.00. The color space is depicted as a series of stacked, slightly offset rectangular planes, creating a 3D effect. The color of the planes varies from dark blue/black at the bottom to light yellow/white at the top. A white box highlights a specific region in the lower-left corner, corresponding to the color of the 'B' stone. An arrow points to the 'B' stone in the top right corner of the image, which is labeled 'Brillantheit $i^* = 0.80$ '. A table in the top right corner lists the colorimetric data for the stones: G, G25B, G50B, G75B, B, B25R, B50R, and B75R, with columns for Y , x , y , and z . The table data is as follows:

	Y	x	y	z
G	56.21	-50.44	14.04	52.36
G25B	57.95	-43.12	-3.96	43.31
G50B	60.3	-33.22	-28.35	43.68
G75B	53.27	-12.42	-41.26	43.1
B	46.07	1.01	-41.12	41.15
B25R	34.63	22.38	-40.91	46.64
B50R	45.15	55.92	-18.57	58.93
