

Figure 1 is a scatter plot showing the relationship between the number of chromosomes (X) and the number of genes (Y). The X-axis ranges from -10 to 10, and the Y-axis ranges from 0.000 to 1.000. Data points are colored by chromosome number: 1 (pink), 2 (purple), 3 (green), 4 (blue), 5 (orange), 6 (red), 7 (brown), 8 (grey), 9 (black), and 10 (white). A legend on the right lists the chromosome numbers and their corresponding colors. The plot shows a positive correlation between the number of chromosomes and the number of genes, with a cluster of points around X=0 and Y=0.5.
