

## Derivation of achromatic receptor response

$$F'_{ab}[x_r/a] \quad x_r = \log(\text{relative luminance})$$

with  $x_r = \log [L/L_u]$  ( $L$ =test luminance)

$L_u$ =surround luminance

$$F'_{ab}[x_r/a] = \frac{4b}{a' \{10^{x_r/a'} + 10^{-x_r/a'}\}^2} = \frac{b}{a' \sinh^2[x_r/a']}$$

function values for  $b=1$  and  $a'=a \ln(10) > 0$ :

$$F'_{a1}[x_r/a' \rightarrow -\infty] = 0 \qquad \qquad x = \log L, u = \log L_u$$

$$F'_{a1}[x_r/a' = 1] = 1 \qquad \qquad x_r = \log [L/L_u]$$

$$F'_{a1}[x_r/a' \rightarrow +\infty] = 0 \qquad \qquad = x - u$$
