

logarithm. B_a , B_o -Daten

$$\log B_a = (\log Q_o + \log G_o) / 2 \quad \log Q_o = -0,35[u_\lambda - u_{420}]^2$$

$$\log B_o = \log B_a + 0,35$$

$$\log [Q_o / B_a, G_o / B_a]$$

$$\log G_o = -0,35[u_\lambda - u_{520}]^2$$

Adaptation: $\lambda_{QG} = 470$
