

Colorimetric workflow at work places: digital input \rightarrow printer \rightarrow analog output
 Identical ISO-test charts of ISO/IEC 15775 and ISO 9241-306 for gamma $\gamma=1$

In this special case the printer driver has the relative gamma $\gamma = 2,105$.

relative gamma	digital input	printer driver	relative gamma	analog output	output contrast	ISO output
-------------------	------------------	-------------------	-------------------	------------------	--------------------	---------------
