

Two standard normal functions according to Gauß

Density function $\phi(u)$ compare with CIE luminance contrast $L/\Delta L$

$$\phi(u) = (1/\sqrt{2\pi}) \cdot e^{-(1/2) \cdot u^2}$$

Distribution function $\phi(u)$ corresponds to the CIE lightness L^*

$$\phi(u) = (1/\sqrt{2\pi}) \int_{-\infty}^u e^{-(1/2) \cdot t^2} dt \quad -0.5 \phi(u) \quad [2]$$
