

Two standard normal functions according to *Gauß*

Density function $\phi(u)$ compare with CIE luminance contrast $L/\Delta L$

$$\phi(u) = (1/\sqrt{2\pi}) \cdot e^{-(1/2) \cdot u^2}$$

$$\phi(u) \quad (-\infty < u < \infty) \quad [1]$$

Distribution function $\Phi(u)$ corresponds to the CIE lightness L^*

$$\Phi(u) = (1/\sqrt{2\pi}) \int_{-\infty}^u e^{-(1/2) \cdot t^2} dt$$

$$-0,5 \Phi(u) \quad [2]$$
