## 8 Device (d) colours in CIELAB: $O Y L C V M$ and $N W$

Hexagon-triangle system based on device (d) colours: $\boldsymbol{r g} \boldsymbol{b}_{\mathrm{d}}^{*}=\boldsymbol{o l} \boldsymbol{\nu}^{*}$ with linear relations between $\boldsymbol{r} \boldsymbol{g} \boldsymbol{b}_{\mathrm{d}}^{\boldsymbol{*}}$ and $\boldsymbol{L C H}{ }^{*}$

(compare linear relations between $r g b_{\mathrm{sRGB}}$ and $L^{*}$ )
Equations $r g b_{d}^{*}-L C H^{*}$ in both directions have been published, see: Richter, CIE-Proceedings, Beijing, 2008, Volume 3 und DIN 33872-1 Three equations (tables) are needed for office applications: $\boldsymbol{r g b}_{\mathrm{d}}-\boldsymbol{L C H} \boldsymbol{H}^{*}, \quad$ for a 9 x 9 x 9 grid of equally spaced $r g b_{\mathrm{d}}$-input data $\boldsymbol{r g} \boldsymbol{b}_{\mathrm{d}}^{*}-\boldsymbol{L C H} \boldsymbol{H}^{*} \quad$ a 9 x 9 x 9 grid of equally spaced data $r g b_{d}^{*}$ and $L C H^{*}$ $r g b_{d}^{\prime}-L C H^{*} \quad$ Device output linearisation by $r g b_{d}->r g b_{d}^{\prime}$
