Equivalent and regular colour spacing of O-C, Y-V, L-M

input: rgb (->olv*) setrgbcolor
output: no change compared to input

Equivalent spacing for separate and adjacent colours (Yes/No decision)

Layout example: hue plane O-C, Y-V oder L-M mit 9 grey steps

Chromatic X
X = O, Y, L
There are three opposite hue planes O-C, Y-V, and L-M. The colour steps are separate in the upper figure part and adjacent in the lower figure part. Between N and W there are 9 grey steps. Mean grey Z is the mean step of N-W.

All the stepings of the three hue planes O-L, Y-V and L-M should be equivalent for separate and adjacent colours.

Is the spacing equivalent for separate and adjacent colours? underline: Yes/No

Remark: The spacing is not equivalent if there is at least one Yes in one of the following cases; for example see Annex (X):

- Is there a continuous colour change for adjacent colours and not for separate colours? underline: Yes/No
- Are there maxima and minima in the colour change for adjacent colours and not for separate colours? underline: Yes/No

Part 3 IE460-5

Regular colour spacing between colours Z-X' and Z-X (Yes/No decision)

Layout example: hue plane O-C, Y-V oder L-M mit 9 colour steps

Chromatic X
X = O, Y, L
There are three opposite hue planes O-C, Y-V, and L-M. The colour steps are separate in the upper figure part and adjacent in the lower figure part. Between X' and X there are 9 colour steps. Mean grey Z is the mean step of X'-X.

All colour steps of the three hue planes O-L, Y-V and L-M should be regular for separate and adjacent colours without large chromatic jumps at mean grey Z

Is the colour spacing regular at mean grey Z? underline: Yes/No

Remark: The colour spacing is not regular if there is at least one Yes in one of the following cases; for example see Annex (X):

- Are there colour jumps at the mean grey colour Z towards X or X' for adjacent colours? underline: Yes/No
- Are there colour jumps at the mean grey colour Z towards X or X' for separate colours? underline: Yes/No

Remarks: A colour jump has at least twice the colour change compared to the mean change.
