

logarithm. D_a , D_o -Daten

$$u_\lambda = (\lambda - 550) / 50$$

$$\log D_a = (\log G_o + \log J_o) / 2 \quad \log G_o = -0,35[u_\lambda - u_{500}]^2$$

$$\log D_o = \log D_a + 0,196 \quad \log J_o = -0,35[u_\lambda - u_{575}]^2$$

$$\log [D_o, D_a, G_o, J_o] \quad \text{Adaptation: } \lambda_{UT} = 538$$

$$c = -1 / \log J_o[500] \quad 500 \quad 538 \quad 575 \quad c = 1.26$$
