

logarithm. W_a , W_o -Daten

$$u_\lambda = (\lambda - 550) / 50$$

$$\log W_a = 2 \log D_o - \log U_o \quad \log U_o = -0,35[u_\lambda - u_{550}]^2$$

$$\log W_o = \log W_a - 0,04 \quad \log D_o = -0,35[u_\lambda - u_{538}]^2$$

$$\log [W_a, W_o, U_o, D_o] \quad \lambda_{UT} = 537,5$$
