

# Contrast step $C_{Y_i}$ (i=1 to 8), CIE tristimulus value $Y_N$ , grey steps according to ISO 9241-306<sup>1)</sup>

Contrast step $C_{Y_i}$ and $Y$ -ratio (i=1 .. 8)	CIE tristimulus value $Y_N$ and CIE lightness $L^*_N$ of black	total viewing illuminance $E_{P+R}$ [lux] <sup>2)</sup>	measured projector (P) display illuminance $E_P$ [lux] <sup>2)</sup>	room light (R) display illuminance $E_R$ [lux] <sup>2)</sup>	grey steps without linearisation delta $L^*=1$ amount $a_n$ <sup>3)</sup>	grey steps with linearisation delta $L^*=1$ amount $a_l$ <sup>3)</sup>
---	--	---	--	--	---	--

The following example assumes that a projector produces the contrast step  $C_{Y_3}$  for the illuminances measured for 5 times the horizontal A4 direction (149 cm):

$C_{Y_3}$ <b>9:1</b>	10 / 38	2500+2000	4000	500	28	57
$C_{Y_2}$ <b>4,5:1</b>	20 / 52	1250+1000	1750	500	21	43
$C_{Y_1}$ <b>2,25:1</b>	40 / 70	625+500	625	500	12	25

The illuminances  $E_P$  are by the factor 4 less for 10 times the A4-direction (298 cm):

$C_{Yx1}$ <b>3:1</b> <sup>4)</sup>	30 / 61	1000+500	1000	500	17	34
$C_{Yx2}$ <b>1,9:1</b> <sup>5)</sup>	45 / 74	438+500	438	500	10	21

1) The example is intended for data projectors (P). The standard contrast step (bold)  $C_{Y5} = 36:1$  is not reached.

2) 500 lux corresponds to the viewing luminance  $L_v = 142 \text{ cd/m}^2$  for a standard white paper with the tristimulus value  $Y_W = 88,9$ .

3) For the amount of discriminable colour steps use the equations:  $c_n = a_n^3$  or  $c_l = a_l^3$ , for example  $c_n = 4096$  for  $a_n = 16$ .

4) The viewing contrast  $C_{Yx1} = 1500:500 = 3:1$  is larger compared to the contrast  $C_{Y1} = 2,25:1$ . The contrast step is  $C_{Y1} = 2,25:1$ .

5) The viewing contrast  $C_{Yx2} = 938:500 = 1,9:1$  is smaller compared to the contrast  $C_{Y1} = 2,25:1$ . A contrast step is not defined.
