Contrast step C_{Vi} (i=1 to 8), CIE tristimulus value Y_N , grey steps according to ISO 9241-306¹⁾

Contrast step C_{Vi} and Y-ratio (i=1 .. 8)	CIE tristimulus value Y_N and CIE lightness L^*_N of black	total viewing display illumination E_{P+R} [lux] ³⁾	measured projector (P) display illumination E_P [lux] ³⁾	room light (R) display illuminance E_R [lux] ³⁾	grey steps without output linearisation delta $L^*=1$ amount $a_n^{(2)}$	grey steps with output linearisation delta $L^*=1$ amount $a_t^{(2)}$
$C_{V8} \text{ 288:1}$	0,31 / 1	80000+64000	143500	500	47 (max)	94 (max)
$C_{V7} \text{ 144:1}$	0,62 / 6	40000+32000	61500	500	44	88
$C_{V6} \text{ 72:1}$	1,25 / 11	20000+16000	35500	500	42	84
$C_{V5} \text{ 36:1}$	2,5 / 18	10000+8000	17500	500	38	77
$C_{V4} \text{ 18:1}$	5,0 / 27	5000+4000	8500	500	34	68
$C_{V3} \text{ 9:1}$	10 / 38	2500+2000	4000	500	28	57
$C_{V2} \text{ 4,5:1}$	20 / 52	1250+1000	1750	500	21	43
$C_{V1} \text{ 2,25:1}$	40 / 70	625+500	625	500	12	25

1) The example is intended for data projectors (P). The standard contrast step (bold) $C_{V3} = 36:1$ is hard to reach.2) For the amount of discriminable colour steps use the equations: $c_n = a_n^{-1}$ or $c_t = a_t^{-1}$, for example $c_n = 4096$ for $a_n = 16$.3) For the contrast $C_{Vi} > 2:1$ the viewing luminances of both the black in the projection and the white standard offset paper are equal (3).

Visual fatigue caused by the adaptation luminance ratio 36:1 of the black at the screen and the black at the paper shall be reduced.

If for example a grey screen with the CIE tristimulus value $Y_p = 22,2 (=0,25*88,9)$ is used the contrast step C_{Vi} remains constant.

Then the luminance ratio of all colours at the screen and the paper has reduced to 9:1. This reduces visual fatigue.

$C_{V1} \text{ 2,25:1}$	40 / 70	150+125	150	125	12	25

1) The example is intended for data projectors (P). The standard contrast step (bold) $C_{V3} = 36:1$ is hard to reach.2) For the amount of discriminable colour steps use the equations: $c_n = a_n^{-1}$ or $c_t = a_t^{-1}$, for example $c_n = 4096$ for $a_n = 16$.3) For the contrast $C_{Vi} > 2:1$ the viewing luminances of both the black in the projection and the white standard offset paper are equal (3).

Visual fatigue caused by the adaptation luminance ratio 36:1 of the black at the screen and the black at the paper shall be reduced.

If for example a grey screen with the CIE tristimulus value $Y_p = 22,2 (=0,25*88,9)$ is used the contrast step C_{Vi} remains constant.

Then the luminance ratio of all colours at the screen and the paper has reduced to 9:1. This reduces visual fatigue.

PI04-3N

Contrast step C_{Vi} (i=1 to 8), CIE tristimulus value Y_N , grey steps according to ISO 9241-306¹⁾

Contrast step C_{Vi} and Y-ratio (i=1 .. 8)	CIE tristimulus value Y_N and CIE lightness L^*_N of black	total viewing display illumination E_{P+R} [lux] ²⁾	measured projector (P) display illumination E_P [lux] ²⁾	room light (R) display illuminance E_R [lux] ²⁾	grey steps without output linearisation delta $L^*=1$ amount $a_n^{(3)}$	grey steps with output linearisation delta $L^*=1$ amount $a_t^{(3)}$
$C_{V8} \text{ 9:1}$	10 / 38	2500+2000	4000	500	28	57
$C_{V2} \text{ 4,5:1}$	20 / 52	1250+1000	1750	500	21	43
$C_{V1} \text{ 2,25:1}$	40 / 70	625+500	625	500	12	25

The following example assumes that a projector produces the contrast step C_{V3} for the illuminances measured for 5 times the horizontal A4 direction (149 cm):

$C_{V4} \text{ 9:1}$	10 / 38	2500+2000	4000	500	28	57
$C_{V2} \text{ 4,5:1}$	20 / 52	1250+1000	1750	500	21	43
$C_{V1} \text{ 2,25:1}$	40 / 70	625+500	625	500	12	25
The illuminances E_p are by the factor 4 less for 10 times the A4-direction (298 cm):						
$C_{V4} \text{ 3:1}^{\text{4)}$	30 / 61	1000+500	1000	500	17	34
$C_{V2} \text{ 1,9:1}^{\text{5)}$	45 / 74	438+500	438	500	10	21

1) The example is intended for data projectors (P). The standard contrast step (bold) $C_{V3} = 36:1$ is not reached.2) 500 lux corresponds to the viewing luminance $L_v = 142 \text{ cd/m}^2$ for a standard white paper with the tristimulus values $Y_w = 88,9$.3) For the amount of discriminable colour steps use the equations: $c_n = a_n^{-1}$ or $c_t = a_t^{-1}$, for example $c_n = 4096$ for $a_n = 16$.4) The viewing contrast $C_{Vi} = 1500:500 = 3:1$ is larger compared to the contrast step $C_{Vi} = 2,25:1$.5) The viewing contrast $C_{V2} = 938:500 = 1,9:1$ is smaller compared to the contrast $C_{V1} = 2,25:1$. A contrast step is not defined.
