The ISO/IEC-input linearisation method produces an ISO/IEC-file from an ISO/IEC-original scene:
Flower motif with 16 equidistant grey steps, and 14 CIE-test colours according to CIE 13.3

The ISO/IEC-output linearisation method produces from an ISO/IEC-file a linearized display, offset or printer output:

What is Output Linearization? (For the elementary hues, see CIE R1-47:2009.)
The colour space of a double cone includes 6 colours. The six colours can be the device-dependent device colours (index d): ($R_d, Y_d, G_d, B_d, N_d, W_d$) or the device-independent elementary colours (index e): ($R_e, Y_e, G_e, B_e, N_e, W_e$). Elementary red appears neither yellowish nor bluish. The hue angle is $h_{ab,e} = 26$.

For example for the sRGB colours according to IEC 61966-2-1 it is valid:
Device red R_d has the coordinates rgb^*R_d and $LCh^*R_d = (L^*, C^*_{ab}, h_{ab})R_d$
Elementary red R_e has the coordinates rgb^*R_e and $LCh^*R_e = (L^*, C^*_{ab}, h_{ab})R_e$
Corresponding data are given in the following for R_d , R_e , and $W = W_d = W_e$

$$rgb^*R_d = (1\ 1\ 0)_W$$

$$LCh^*R_d = (50, 100, 40)_Rd$$

$$rgb^*R_e = (1\ 0\ 0)_Re$$

$$LCh^*R_e = (50, 87, 26)_Re$$

Output Linearization of CIE R1-09:2015 produces for the hue angle $h_{ab,Re} = 26$ the CIELAB data $L^*Re = 50$ and $C^*_{ab,Re} = 87$. These CIELAB data are produced with the device to elementary input data (de)
 $rgb^{de,Re} = (1\ 0\ 0, 26)_{de,Re}$

A calculated table for 360 hue angles includes:
 $h_{ab} \quad LCh^*_{de} \quad rgb^{de}$
26 50 87 26 1 0 0,26

Three device (d) coordinates rgb^*d describe 8 device colours RGB_d , CMY_d , and NW .

Hexagon-triangle system based on device (d) colours: rgb^*d with linear relations between $rgb^*d - LCh^*d$
(compare approximately linear relations between rgb_{sRGB} and L^*)

Equations $rgb^*_d - LCh^*_d$ in both directions have been published, see:
Richter, CIE-Proceedings, Beijing, 2008, Volume 3 und DIN 33872-1

Three equations (tables) are needed for office applications:

$rgb_d - LCh^*_d$ for a 9x9x9 grid of equally spaced rgb_d input data

$rgb^*_d - LCh^*_d$ a 9x9x9 grid of equally spaced data rgb^*_d and LCh^*_d

$rgb^*_d - LCh^*_d \sim LCh^*_d$ device linearization: $rgb_d \rightarrow rgb^*_d = rgb_{dd}$

Three elementary (e) coordinates rgb^*e describe 8 colours RGB_e , CMY_e , and NW .

Hexagon-triangle system based on elementary (e) colours: rgb^*e with linear relations between $rgb^*e - LCh^*e$
(compare approximately linear relations between rgb_{sRGB} and L^*)

Equations $rgb^*_e - LCh^*_e$ in both directions have been published, see:
Richter, CIE-Proceedings, Beijing, 2008, Volume 3 und DIN 33872-1

Three equations (tables) are needed for office applications:

$rgb_d - LCh^*_e$ for a 9x9x9 grid of equally spaced rgb_d -input data

$rgb^*_e - LCh^*_e$ a 9x9x9 grid of equally spaced data rgb^*_e and LCh^*_e

$rgb^*_e - LCh^*_e \sim LCh^*_e$ elementary linearization: $rgb_d \rightarrow rgb^*_e = rgb_{de}$

immettere: w/rgb/cmyk \rightarrow w/rgb/cmykd
uscita: nessun cambiamento
