## Equations: colorimetric data transfer from $r g b_{\mathrm{e}}$ to $n c e^{*}{ }_{\mathrm{e}}$ data and $L C H^{*}$

## Given: $r g b_{\mathrm{e}}$ elementary colour data of any colour $r g b_{\mathrm{e}}=l a b^{*} r g b_{\mathrm{e}}$ and of 48 step colour circle $j=0$ to 47

$\boldsymbol{r g} \boldsymbol{b}_{\mathrm{Me}, \mathrm{j}}$ and adapted CIELAB data $\boldsymbol{L}^{*}{ }_{\mathrm{Me}, \mathrm{j}}, \boldsymbol{C}^{*}{ }_{\mathrm{ab}, \mathrm{a}, \mathrm{Me}, \mathrm{j}}, \boldsymbol{h}_{\mathrm{ab}, \mathrm{a}, \mathrm{Me}, \mathrm{j}}=\boldsymbol{L C H}{ }^{*}{ }_{\mathrm{a}, \mathrm{Me}, \mathrm{j}}$
Aim: calculate $\boldsymbol{n c} \boldsymbol{e}^{*}{ }_{\mathrm{e}}$ with $\left(0<=n^{*}{ }_{\mathrm{e}}, c^{*}{ }_{\mathrm{e}}, e^{*}{ }_{\mathrm{e}}<=1\right)$ (similar to NCS data) and $\boldsymbol{L C H}{ }^{*}{ }_{\mathrm{a}, \mathrm{e}}$ data of elementary colour Data of a given elementary (e) colour
relative chroma of the elementary colour relative blackness of the elementary colour relative triangle lightness of the elementary colour relative red-green chroma in $4 \times 90$ degree system s relative yellow-blue chroma in $4 \times 90$ degree system s hue angle in $4 \times 90$ degree system s hue number in 4 x 90 degree system s CIELAB hue angle in elementary system adapted CIELAB $L C H^{*}{ }_{\mathrm{a}, \mathrm{e}}$ data of maximum colour $M_{\mathrm{e}}$
relative lightness of maximum colour $M_{\mathrm{e}}$ relative lightness of the elementary colour adapted CIELAB $L C H^{*}$ a,e data of the elementary colour
