The ISO/IEC-input linearisation method produces an ISO/IEC-file from an ISO/IEC-original scene:
Flower motif with 16 equidistant grey steps, and 14 CIE-test colours according to CIE 13.3

The ISO/IEC-output linearisation method produces from an ISO/IEC-file a linearized display, offset or printer output:

SN200-TN

What is Output Linearization? (For the elementary hues, see CIE R1-47:2009.)
The colour space of a double cone includes 6 colours. The six colours can be the device-dependent device colours (index d): (R, Y, G, B, N, W)_d or the device-independent elementary colours (index e): (R, Y, G, B, N, W)_e. Elementary red appears neither yellowish nor bluish. The hue angle is $h_{ab,e} = 26$.

For example for the sRGB colours according to IEC 61966-2-1 it is valid:
Device red R_d has the coordinates $rgb^*_{d,Rd}$ and $LCh^*_{d,Rd} = (L^*, C^*_{ab}, h_{ab})_{Rd}$
Elementary red R_e has the coordinates $rgb^*_{e,Rd}$ and $LCh^*_{e,Rd} = (L^*, C^*_{ab}, h_{ab})_{Re}$
Corresponding data are given in the following for R_d , R_e , and $W=W_d=W_e$

$$rgb^*W = (1 \ 1 \ 1)W$$

$$LCh^*W = (L^*, C^*_{ab}, h_{ab})W = (95, 0, -)W$$

$$rgb^*_{de,Rd} = (1 \ 0 \ 0)_{Rd}$$

$$LCh^*_{de,Rd} = (50, 100, 40)_{Rd}$$

$$rgb^*_{Re} = (1 \ 0 \ 0)_{Re}$$

$$LCh^*_{Re} = (50, 87, 26)_{Re}$$

Output Linearization of CIE R1-09:2015 produces for the hue angle $h_{ab,Re} = 26$ the CIELAB data $L^*_{Re} = 50$ and $C^*_{ab,Re} = 87$. These CIELAB data are produced with the device to elementary input data (de)

$$rgb^*_{de,Re} = (1 \ 0 \ 0, 26)_{de,Re}$$

A calculated table for 360 hue angles includes:

$$h_{ab} \quad LCh^*_{de} \quad rgb^*_{de}$$

$$26 \quad 50 \ 87 \ 26 \quad 1 \ 0 \ 0,26$$

Three device (d) coordinates rgb^*_d describe 8 device colours RGB_d , CMY_d , and NW .
Hexagon-triangle system based on device (d) colours: $rgb^*_{d,a}$ with linear relations between $rgb^*_{d,a} - LCh^*_{d,a}$ (compare approximately linear relations between rgb^*_{sRGB} and L^*)

Equations $rgb^*_{d,a} - LCh^*_{d,a}$ in both directions have been published, see: Richter, CIE-Proceedings, Beijing, 2008, Volume 3 and DIN 33872-1

Three equations (tables) are needed for office applications:

$$rgb^*_{d,a} - LCh^*_{d,a} \text{ for a } 9x9x9 \text{ grid of equally spaced } rgb^*_{d,a} \text{ input data}$$

$$rgb^*_{d,a} - LCh^*_{d,a} \text{ a } 9x9x9 \text{ grid of equally spaced data } rgb^*_{d,a} \text{ and } LCh^*_{d,a}$$

$$rgb^*_{d,a} - LCh^*_{d,a} - LCh^*_{d,a} \text{ device linearization: } rgb^*_{d,a} - rgb^*_{d,a} = rgb^*_{d,a}$$

Three elementary (e) coordinates rgb^*_e describe 8 colours RGB_e , CMY_e , and NW .
Hexagon-triangle system based on elementary (e) colours: $rgb^*_{e,a}$ with linear relations between $rgb^*_{e,a} - LCh^*_{e,a}$ (compare approximately linear relations between rgb^*_{sRGB} and L^*)

Equations $rgb^*_{e,a} - LCh^*_{e,a}$ in both directions have been published, see: Richter, CIE-Proceedings, Beijing, 2008, Volume 3 and DIN 33872-1

Three equations (tables) are needed for office applications:

$$rgb^*_{e,a} - LCh^*_{e,a} \text{ for a } 9x9x9 \text{ grid of equally spaced } rgb^*_{e,a} \text{ input data}$$

$$rgb^*_{e,a} - LCh^*_{e,a} \text{ a } 9x9x9 \text{ grid of equally spaced data } rgb^*_{e,a} \text{ and } LCh^*_{e,a}$$

$$rgb^*_{e,a} - LCh^*_{e,a} - LCh^*_{e,a} \text{ elementary linearization: } rgb^*_{e,a} - rgb^*_{e,a} = rgb^*_{e,a}$$

input: w/ $rgb/cmky$ \rightarrow w/ $rgb/cmkyd$
output: no change compared
