

$\log [\Delta L, \Delta a L, \Delta b L]$

• $L_g = 60 \text{ cd/m}^2$

3 Differenzrenschwelle

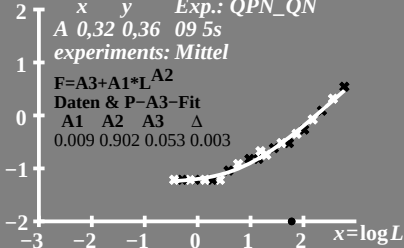

x y *Exp.: QPN_QN*
A 0,32 0,36 09 5s

experiments: Mittel

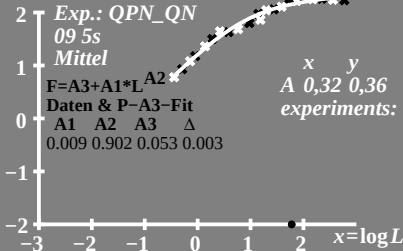

$F = A_3 + A_1 * L^{A_2}$

Daten & P-A3-Fit

A_1	A_2	A_3	Δ
0.009	0.902	0.053	0.003

$\log [L/\Delta L, L/(\Delta a L), L/(\Delta b L)]$ • $L_g=60\text{cd/m}^2$
 3 Empfindlichkeitsschwellen

$L/\Delta L, L/(\Delta a L), L/(\Delta b L)$

• $L_g = 60 \text{ cd/m}^2$
