

heq21-7a, image 3, produce equal visual difference between four of nine steps

heq21-7n

equally spaced  $0 \ll rgb *_{in} \ll 1$ 

Input (9 steps)

heq21-8a, image 4, adjust visual threshold (+0,04?) of 9 steps; all equal?

grey example difference visible?

c1=0.12 c2=0.25 c3=0.37 c4=0.50 c5=0.62 c6=0.75 c7=0.87

adjust and proof threshold of

the linearized output restart with image 1

0,25 ±0,06 ♦ adjust threshold 0,25 ±0,00 ♦ no change
