

$F_{ab}(x_r)$ = achromatic receptor response, TUB model

$$F_{ab}(x_r) = b \frac{p}{p+q} + b \frac{-q}{p+q} = b \frac{p-q}{p+q}$$

$p = e^{x_r/a}$ $q = e^{-x_r/a}$
 $a=1,00, b=1,00 \quad e=2,718282$

$$F'_{ab}(x_r) = 4b / [a\{e^{x_r/a} + e^{-x_r/a}\}^2] = 4b / [a\{p+q\}^2]$$

$a=1,00; b=1,00$
