

9 step series with grey sample and surround too dark, adjust both with a value larger "0.50"

adjust visual equal difference for Grey U between White W and Black N

The gamma value $\gamma_{in}=0,666$ of the software *GammaAdjuster* reaches equal differences and corresponds to $e_{00}=0,62$.

0 $e_{00}=0,62 \phi$ 1

Output (9 steps)
adjusted spacing
 $0 \leq \text{rgb}^*_{out} \leq 1$

go to next image 2

one experimental value:
 $e_{00}=0,62$
real gamma value:
 $\gamma_{re} = \log [0,50] / \log [e_{00}] = 1,500$
inverse gamma value:
 $\gamma_{in} = \log [e_{00}] / \log [0,50] = 0,666$
The software *GammaAdjuster* reaches equal differences for $\gamma_{in}=0,666$
equally spaced
 $0 \leq \text{rgb}^*_{in} \leq 1$
Input (9 steps)
